PROFESSIONAL SUMMARY

Python Developer and GenAI Engineer with 2+ years of experience building scalable backend systems, REST APIs, AI-powered applications, and NLP-driven workflows. Strong expertise in FastAPI, LLM applications, RAG systems, LangChain, and machine learning. Proven impact across production systems with 87% model accuracy, 60–70% workflow automation improvement, sub-2-second API latency, and 40% backend performance optimization.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Frameworks & APIs: FastAPI, Flask, REST APIs, Microservices

GenAI & AI/ML: OpenAI API, LangChain, LangGraph, RAG, Vector Databases, NLP, Prompt Engineering, Scikit-learn, XGBoost, spaCy, Pandas, NumPy

Databases: PostgreSQL, MySQL, Redis

Tools & DevOps: Git, Docker, AWS (Basic), Linux, Postman

Core Concepts: System Design, ETL Pipelines, API Optimization, OOP, Data Structures, Backend Development

PROFESSIONAL EXPERIENCE

AI Engineering Intern

Feb 2026 – Present

Shyam Technologies

Bengaluru

- Built an AI-powered CRM platform to solve delays in clinical workflow documentation by integrating React frontend with FastAPI backend for real-time structured data processing, improving operational efficiency across teams.
- Designed and implemented NLP pipelines using OpenAI API, LangChain, and spaCy for entity extraction, summarization, and recommendation generation, reducing manual documentation effort by 60–70% and accelerating decision-making.
- Optimized backend APIs using Redis caching, validation layers, and performance tuning to resolve latency bottlenecks, achieving sub-2-second response time and improving team productivity by 40%.
- Deployed scalable services using Docker and AWS with zero downtime while working in Agile development environments.

Salesforce Developer Trainee

Oct 2024 – Feb 2026

Middleware Talents Ltd

Bengaluru

- Automated 10+ business workflows reducing manual effort by 40% and improving process efficiency across teams.
- Designed custom objects, validation rules, and approval flows improving data accuracy by 30%.
- Built dashboards and reports reducing reporting turnaround time by 50% for operational teams.
- Integrated external systems using REST APIs enabling real-time data synchronization across applications.

Python Developer (Freelance)

Mar 2024 – Oct 2024

Remote

- Developed secure backend systems using RBAC and AES-256 encryption with zero security incidents across deployed applications.
- Built billing automation systems processing 500+ transactions monthly with 95% accuracy and faster operational turnaround.
- Designed robust REST APIs with strong validation, logging, and exception handling improving backend stability by 40%.

Software Developer Trainee

Mar 2023 – Mar 2024

Packet Prep

Hyderabad

- Built Java and SQL-based billing systems eliminating manual invoicing and improving operational efficiency.
- Implemented authentication, validation logic, and secure workflows ensuring zero critical production defects.

PROJECTS

AIVOA – AI-Powered CRM Assistant	2026 – Present
• Built an NLP-based CRM assistant to address manual clinical documentation challenges by extracting clinical entities, summarizing conversations, and generating recommendations using OpenAI API, LangChain, FastAPI, and Redis. • Reduced manual documentation effort by 60–70% and improved operational productivity by 40% across internal workflows. • Built scalable FastAPI backend with Redis caching and validation achieving sub-2-second response latency in production.	
RAG + Vector Database + LangGraph Knowledge Assistant	2025 – 2026
• Developed an enterprise-grade Retrieval-Augmented Generation system to solve inaccurate document search and fragmented knowledge access using LangGraph, LangChain, vector databases, and OpenAI models for reliable document intelligence. • Implemented chunking, embeddings, semantic search, retrieval optimization, and multi-step agent workflows improving answer relevance by 90%+. • Solved hallucination and context-window limitations using hybrid retrieval strategies, metadata filtering, and prompt optimization for reliable production responses.	
Customer Churn Prediction Model	2024 – 2025
• Built a customer churn prediction model to improve customer retention strategy by training ML models on 7,000+ records using Scikit-learn and XGBoost, achieving 87% accuracy and 0.91 ROC-AUC. • Performed feature engineering, preprocessing, model evaluation, and business impact analysis for customer retention optimization.	
Employment Resource Sharing System	2023 – 2024
• Designed ETL pipelines with REST API integration and automated validation workflows reducing data-entry errors by 50%. • Built secure multi-user platform using RBAC and AES-256 encryption improving reporting efficiency by 50% and system uptime by 40%.	

EDUCATION

B.Tech in Computer Science and Engineering	Graduated: 2022
<i>B V S R Engineering College, Andhra Pradesh</i>	<i>CGPA: 7.2 / 10</i>

CERTIFICATIONS

- Python Certification
- Salesforce Administrator Certification (In Progress)
- Machine Learning Specialization (Completed)
